DETAILED ACTION

Response to the Amendments and Arguments

1. Applicant's amendment filed on 05/07/2008 and arguments filed on 07/22/2008 have been considered and entered in full.
2. Applicant's arguments with respect to respective amended claims have been considered and are persuasive; therefore all the rejections on the respective claims have been withdrawn.

Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with applicant's attorney/agent of record, Mr. Jesse Sukman, Registration No. 54,477, on 11/07/2008, at 3:15 p.m.,
Examiner's amendment:

In The Claims

- (a). The following changes to the claims have been approved by the examiner and agreed upon by applicant:

- (i) **Replace the subject matter of claim 1 as presented in the amendment filed on 05/07/2008 with:**

Examiner's amendment: "A color data accuracy calculation method comprising:

using a computer, performing the steps of:

extracting from a plurality of color signal pairs each including an input color signal in an input color space and a counterpart output color signal in an output color space, a target color signal pair including a target input color signal and a counterpart target output color signal in the output color space, which is to be calculated an accuracy thereof;

extracting from the plurality of color signal pairs, a plurality of output vicinity color signals corresponding to a plurality of input vicinity color signals, which are located in the vicinity of the target input color signal in the input color space; and

calculating a color signal pair accuracy of the target color signal pair on the basis of a relation between the target output color signal and the plurality of output vicinity color signals,

wherein the calculating is calculating the color signal pair accuracy using a color signal statistical distance, which is a statistical distance between the target output color signal and the plurality of output vicinity color signals, and

wherein the calculating is calculating the color signal pair accuracy using a monotone decreasing and smooth function of the color signal statistical distance".

(ii) **Replace the subject matter of claim 9 as presented in the amendment filed on 05/07/2008 with:**

Examiner's amendment: "A color process method comprising:

Art Unit: 2624

using a computer, performing the steps of:

extracting from a plurality of real data pairs each including:

an input color signal in an input color space to one of a color image input apparatus and a color image output apparatus; and

a counterpart output color signal in an output color space, a target color signal pair including a target input color signal and a counterpart target output color signal in the output color space, which is to be calculated an accuracy thereof;

extracting from the plurality of real data pairs, a plurality of output vicinity color signals corresponding to a plurality of input vicinity color signals, which are located in the vicinity of the target input color signal in the input color space;

calculating a color signal pair accuracy of the target color signal pair on the basis of a relation between the target output color signal and the plurality of output vicinity color signals;

repeating the extracting the target color signal pair, the extracting the output vicinity color signals, and the calculating the color signal pair accuracy while changing the target color signal pair to calculate accuracies of the real data pairs; and

calculating a prediction output color signal corresponding to a desired input color signal based on the real data pairs and the accuracies of the real data pairs,

wherein the calculating is calculating the color signal pair accuracy using a color signal statistical distance, which is a statistical distance between the target output color signal and the plurality of output vicinity color signals, and

Art Unit: 2624

wherein the calculating is calculating the color signal pair accuracy using a monotone decreasing and smooth function of the color signal statistical distance”.

Allowable Subject Matter

Reasons of Allowance:

4. Claims 1, 4-11, 14-20 and 23-24 (renumbered as 1-18) are allowed.

The following is an examiner's statement of reasons of allowance:

The reasons of allowance for claims 1, 9, 11, 19, 23 and 24 should be evident from the applicant's arguments as filed in the amendment filed on 07/22/2008. Therefore, claims 1, 9, 11, 19, 23 and 24 are allowed. All other claims depending on claims 1, 9, 11, 19, 23 and 24 are allowable at least by dependency on claims 1, 9, 11, 19, 23 and 24.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
